libra

```
balance(body: content , max-iterations: int , precision: length ) -> content
```

Balances lines of text while keeping the minimum amount of lines possible. Works by shrinking the width of the text until it can't be shrunk anymore.

Unbalanced text:

```
#rect(width: 25em, lorem(10))
```

> Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do.

Balanced text:

```
#rect(width: 25em, balance(lorem(10)))
```

> Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do.

Parameters:

body (content) – The text to balance.

max-iterations (int = 20) – Maximum number of iterations to perform.

precision (length = 0.1em) – The precision to which to balance.
